

OPTIONAL COURSES

Programme: M.Sc. Marine Biotechnology

Course Code: MBO 183

Title of the course: LAB IV - BIOPROCESS TECHNOLOGY

Number of Credits: 2

Effective from 2019-2020

Course Objectives	The objectives of this laboratory course are to provide hands-on training to students in upstream and downstream unit operations.	
Learning Outcomes	Students should: • Gain ability to investigate, design and conduct experiments, analyze and interpret data, and apply laboratory skills to solve complete bioprocess technology problems. • Use acquired skills and knowledge in solving problems typical of bio-industry and research.	
Contents	1. Microbial production of ethanol using yeast sp. 2. Estimating ethanol concentration by Ceric Ammonium nitrate method. 3. Microbial production and estimation of organic acids: Citric acid using <i>Aspergillus</i> sp. 4. Microbial production of antibiotics. 5. Immobilization of microbial cells: use of alginate. 6. Fermentation: Batch, Fed-Batch and Continuous 7. Use of fermenter with special reference to scale-up operations. 8. Microfiltrations: separation of cells from broth 9. Bioseparations: Chromatography and extractions (organic acid & antibiotics) 10. Manufacture of ginger ale and estimating the alcohol content. 11. Solid State Fermentation: Mushroom cultivation. 12. Food Microbiology: Preparation of an edible fermented product	48 hours
